AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Previously Presented) An apparatus for separating a web material at a line of

weakness, the apparatus comprising:

a) a bedroll having a circumference, the bedroll being disposed such that the web material

passes around at least a portion of the circumference of the bedroll in a direction of travel,

wherein the bedroll is disposed generally transverse to the direction of travel of the web

material,

the bedroll comprising a shell and a bedroll chop off assembly, the bedroll chop off

assembly comprising at least one web pin having a distal portion and at least one bedroll

blade having a distal portion and a serrated web contacting edge, the bedroll blade being

disposed generally transverse to the direction of travel of the web material, wherein the

distal portions of the at least one bedroll blade and the at least one web pin are capable of

extending beyond the shell of the bedroll,

wherein the bedroll blade rotates at a first circumferential velocity,

b) a chop off roll disposed proximate and generally parallel to the bedroll, the chop off

roll comprising at least one pin pad capable of circumferentially interfering with the at

least one web pin, the chop off roll further comprising at least two chop off roll blades

disposed generally transverse to the direction of travel of the web at a chop off roll blade

spacing, the at least two chop off roll blades being capable of rotationally meshing with

the at least one bedroll blade, wherein the at least two chop off roll blades rotate at a

second circumferential velocity, and wherein the second circumferential velocity is

distinct from the first circumferential velocity.

2. (Cancelled)

Appl. No. 10/652,325

Atty. Docket No. 9350

Amdt. dated May 5, 2008

Reply to Office Action mailed February 6, 2008

Customer No. 27752

3. (Previously presented) The apparatus of claim 1 wherein the bedroll comprises at least

two bedroll blades disposed at a bedroll blade spacing.

4. (Original) The apparatus of claim 3 wherein the bedroll blade spacing is distinct from

the chop off roll blade spacing.

5. (Previously presented) The apparatus of claim 1 wherein the at least one web pin

passes through at least a portion of the at least one pin pad.

6. (Cancelled)

7. (Previously presented) The apparatus of claim 1 wherein the at least two chop off roll

blades comprises three blades.

8. (Previously presented) The apparatus according to claim 1 wherein the at least one pin

pad is capable of circumferentially interfering with at least one of the web pins, and

wherein the at least two chop off roll blades comprise three blades disposed generally

parallel each to the others and generally transverse to the direction of travel of the web,

and wherein said chop off roll further comprises a plurality of web pads disposed

generally transverse to the direction of travel of said web, and wherein at least one of the

three blades is capable of rotationally meshing with the at least one bedroll blade.

9-24. (Cancelled)
